DS2500 Self-Reflection Assignment 3

Does this work reflect your best effort?

Honestly, no- but I got everything except the visualizations done. I've had more assignments due this week than days to do them, had to work against the clock to get everything in on time (and even then I'm turning this homework in at almost 1am), and won't even have time this weekend to remedy my organization for the coming week. It's safe to say that while the assignment is mostly done, it is not the best code I've put out.

What was the most challenging part of the assignment?

Cleaning the data took a bit of work, and I honestly couldn't figure out how the groupby method from pandas worked. It wasn't creating any new kind of organization and the examples in the documentation didn't explain how to create certain organizational structures without having them already defined in a certain way, so I just did it by hand with a loop and a dictionary.

What function(s) or problem(s) would you like feedback on and why?

I don't really want any feedback, this isn't something that reflects my Python ability and it won't be constructive to be judged on it. I know what I should have done better.
